MEMORANDUM FOR THE RECORD

SUBJECT: McLean Citizens Meeting - 25 October 1984

STAT

1. The undersigned and [redacted] Chief, Headquarters Operations, Maintenance and Engineering Division, Office of Logistics, attended a meeting of the Traffic Committee of the McLean Citizens Association (MCA) on the evening of 25 October. The first item on the Committee agenda was a decision regarding which of two road designs for Route 123 should be supported by the MCA.

2. A motion was forwarded early in the discussion to support alternative 2, the lower cost at-grade design. While there was some heated debate from some Committee members regarding the need to take advantage of the Federal funding to build as much road as possible, these arguments were put forward by members from the other end of town, and their arguments were not well received by the majority of the members.

3. The motion to support the at-grade road design carried, and the remainder of the discussion consisted of a series of motions to add stipulations to the motion concerning details of the final design such as berms, landscaping, and operation of traffic signals. The only surprise motion was by Mr. Kent Maxfield, who asked that a prefatory paragraph be added to the motion commenting on the cooperative spirit the Agency has shown in working with the community.

4. Mrs. Lila Richards, Committee Chairperson, stated that the motion would be brought before the Board of the MCA in early November. Assuming the Board supports the motion, a CIA Traffic Advisory meeting would then be possible about mid-November. Following that meeting, there should be a public information meeting at a local auditorium some time in early December.
